

The Lopez Island School District is reaching out to its constituents to seek approval for the renewal of the capital projects and technology levy for a four-year term. This levy plays a critical role in securing the necessary finances to keep pace with advancements in education technology. Further, it ensures that the district can fund safety enhancements, significant repairs and maintenance activities. Renewing this levy is crucial for the district to upgrade and maintain its infrastructure and educational resources, ensuring a safe, modern learning environment for students.

The school district actively seeks competitive grants to secure crucial financial resources. Despite these rigorous efforts, the district still relies on local levies as the grants are not sufficient to cover all costs associated with the upkeep of the infrastructure and technological needs. Thus, local levy support is essential for the Lopez Island School District.

The committee overseeing this initiative is composed of members from the community, parents, school board, students, and staff. They are guided by a comprehensive capital and technology implementation plan, which is designed to ensure that both students and teachers operate in an environment that is not only safe but also well-equipped with the necessary technology tools. Supporting this levy ensures that all students have equitable access to quality education and the necessary tools for academic success. Vote yes to preserve, protect and improve these valuable assets, ensuring their sustained use for future generations.

Vote **YES** on the levy, vote **YES** for Lopez kids!
